ABOUT ME

I am a front-end developer passionate about technology, personal development and the environment. I am always looking for more conscious ways to relate to myself and others, for that reason, after a few years validating projects in the pharmaceutical sector, I am embarking on a new path in IT. Right now I'm learning Python, OCI and MySQL for backend, database and data science. I would love to optimize workflows and delivery times by applying my experience in projects and development technologies.

SKILLS

- Technologies: Java, JavaScript, HTML5, CSS3, React, TailwindCSS, Bootstrap, Git, MySQL, TypeScript and Figma.
- Structured programming
- Object Oriented Programming
- Asynchronous programming
